

User Story 2

"As a user, I want to see my Steam account and top runtimes displayed."

When the app works:

- User logs in successfully
- User can authenticate their google account
- See user story 1
- User views a list of most played games
- User can access their Steam account and Steam ID

Satisfaction criteria

- The app successfully authenticates and validates user's steam ID
- Successfully obtains user's top runtimes
- Displays them to the user

Unsatisfactory criteria

- User cannot log in successfully
- See user story 1
- Cannot display user's top played games
- Cannot validate user's steam ID
- May be messy for user

This is important because we want the users to be able to access their Steam account and view their top games.
