

User Story 3:

“As a user, I want to be able to login with my Google account or to login without using Google”

When the app works:

- User opens our web app
- User sees option to login with Google or to sign up normally
- User logs in/authenticates using their google account or the default way
  
- User data will be stored in the database

When the app doesn't work:

- User opens our web app
- User attempts to log in using their google account or to create an account
- Web app is unable to login for some reason
  
- Not able to view game news articles page

Satisfaction criteria

- The user can log in successfully
- The user can access news articles based on their steam id

Unsatisfactory criteria

- User cannot log in successfully
- UI that is unclear and confusing

Being able to log in and access our website is important.
